

# Growing to Meet Customers' Needs

October 1, 2011

**American Microwave Corporation plans to consolidate its three facilities into one larger building at 7309 Grove Road, Frederick Maryland.**

**Since it's founding in 1978, American Microwave Corporation (AMC) has become a leader in the design and manufacture of microwave components and assemblies, many of which are used in communications, radar and other electronic equipment in both industrial and defense applications. A commitment to manufacturing Quality parts and exceeding their customer's expectations has pushed the limits of their current space.**

**At their new Grove Road building, AMC will be able to combine Engineering, Assembly, Test, Administration and a large Machine shop under one roof. “The facility was a blank canvas; it gave us an opportunity to lay-out the building exactly the way we wanted. It will be efficient, practical and user friendly for our customers and employees” said Darrick Francis, VP of Operations and long-time Frederick resident. With more than 15,000 square feet, the new location will include a doubling in the size of AMC's Assembly, Test and Clean room areas. All of this is encouraging to Francis, “Not only is it ideal for us today; it will allow us to support our customers and sustain our growth for years to come”.**

**In the past year, AMC has added new employees in Electronic Assembly, Quality Inspection, Material Handling, and RF Testing. AMC's need for production and engineering personnel especially with experience in radio frequency and microwave electronics will continue.**

**AMC has plans in place to maintain its ISO-9001:2008 at the new facility. In addition, it is actively working with its customers to meet criteria for Quality and Facility Audits and Certifications. The new facility will be fully operation in early 2012.**
